

adenia

Originating in Madagascar, tropical regions of eastern and western Africa, and southeast Asia, Adenia are available in many different forms.

Adenia need bright light for optimal growth and plant health and prefer full, direct sun. Place in sunny, south-facing window for best results.

Use a sharp, well-drained potting soil such as a Cactus specific mix. Your soil should take up water, but drain and dry quickly.

Water when the top 2-3 inches of soil are dry. Cut back on watering in the winter to avoid root rot.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March

Adenia typically flower in the spring before leaves appear. Many are considered succulents or pachycauls -plants that have a disproportionately thick trunk.
