

aralia

Aralias have been a favored houseplant for decades. They add a touch of softness to any room and are quite easy to grow and enjoy.

Aralia grow best in bright, indirect light, but will tolerate medium light. Low light conditions will hinder growth.

Aralias like a well-drained, all-purpose potting soil with added bark and perlite. Keep soil evenly moist.

Water when the top 2-3 inches of soil are dry. Cut back on watering in the winter to avoid root rot. Do not allow to completely dry out.

Fertilize sparingly with an all-purpose fertilizer. Aralia are not heavy feeders.

Aralia love high humidity and may drop leaves if the air is too dry. Grow in a humid location such as the bathroom or near the kitchen sink. Mist every so often to keep them happy.
