

# caudex plant

Caudex plants, or caudiciform plants, are an odd and unique plant, featuring bulbous stems with a large base.

---

There are many varieties of Caudex plants. Most prefer bright, indirect light.

Fertilize once per month with an all-purpose fertilizer during active growth.

Use a sharp, well-drained potting soil such as a Cactus specific mix. Your soil should take up water, but drain and dry quickly.

Species of caudex plant range between many plant families. Some varieties of caudex plants are categorized as cactus and succulent plants.

Water when the top 2-3 inches of soil are dry. Hold back on watering during winter months. Do not allow to completely dry out.
