

cissus discolor

This trailing plant is commonly known as Rex Begonia Vine. Grow on a trellis or let plant tendrils cascade over the sides of a hanging basket.

Place in bright, indirect light. Tolerates medium light.

Plant in all-purpose potting soil or step-up your game with a terrestrial mix; 2-3 parts all-purpose potting soil, 1 part vermiculite, 1/2 part worm castings.

Water thoroughly, let the top few inches of soil dry between waterings.

Fertilize once per month with an all-purpose fertilizer during active growth - spring and summer. It's better not to fertilize during periods of dormancy, especially if your plant has dropped it's leaves.

Cystoliths are little crystal-like dots that can appear on the leaves of this plant. Be sure not to mistake these for a pest or disease, they are just natural secretions.
