

coffee plant

While the seeds of this plant are responsible for keeping us properly caffeinated, all parts of this plant are toxic to humans and pets.

Place in bright, indirect to medium light. In their natural habitat, Coffee plants grow under the forest canopy.

Fertilize weekly during periods of active growth with an all-purpose fertilizer.

Plant in an all-purpose potting soil with added peat moss to increase acidity.

Although Coffee Plants grow quickly, it can take 3-4 years for them to flower and produce fruit which is highly unlikely in an indoor environment.

Check often for watering. Coffee plants prefer to remain evenly moist, but not saturated or soggy.
