

# croton

Crotons are loved for their fun and funky colorful foliage. They make a great addition to combination plantings, but are also quite stunning all on their own.

---

Crotons need bright light to fully express leaf coloration. Avoid prolonged periods of direct sun when grown outdoors. Plant in an all-purpose potting soil.

Fertilize once or twice per month with an all-purpose fertilizer, especially during periods of active growth - spring and summer.

Plant in a standard, well-draining potting mix.

Planted in tropical climates, Crotons grow to eclipse 10 ft. tall. Crotons produce a milky sap that can irritate the skin or eyes. Handle with care.

Crotons prefer moderate moisture. Too much or too little water will cause leaf drop. Water when the top 2-3 inches of soil are dry.
