

# cryptanthus

Cryptanthus are part of the Bromeliad family, and are commonly known as Earth Star. The color range and leaf patterning is fascinating.

---

Cryptanthus prefer bright, indirect light. Direct sun may cause leaf scorch.

Fertilize once per month with an all-purpose fertilizer during active growth.

Use a sharp, well-drained potting soil such as a Cactus specific mix. Your soil should take up water, but drain and dry quickly.

Cryptanthus produce beautiful blooms, but will only bloom once in it's lifetime.

Water when the soil is mostly dry. Cryptanthus will tolerate drought.
