

ctenanthe

This tropical plant boasts intriguing foliage and a staked form.
Just remember that the “C” is silent.

Indoors, grow in bright, indirect to medium light. Outdoors, place in shade or dappled light. Direct sun may cause leaf burn.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March.

Plant in an all-purpose potting soil, or up your game with a maranta specific mix made up of 2 parts peat moss or coco coir, 1 part all-purpose potting mix, 1 part perlite, and 1/2 part charcoal.

Leaf curl will let you know this plant is unhappy. This is an adaptive strategy to decrease water loss. Add supplemental humidity for ultimate success.

Keep soil evenly moist, but not saturated. Never allow to sit in standing water.
