

fern

Ferns are one of the oldest plant species on earth. They are classified as Gymnosperms and reproduce via spores.

Place in bright, indirect to medium light. Avoid direct sunlight.

Fertilize weekly during periods of active growth with an all-purpose fertilizer.

Plant in all-purpose potting soil or step-up your game with a terrestrial mix; 2-3 parts all-purpose potting soil, 1 part vermiculite, 1/2 part worm castings.

Bird Nest Ferns are an easy care option for fern lovers. They are much more tolerant of drying out and can be planted in a moss ball or mounted on a piece of board or bark.

Ferns require evenly moist soil and extra humidity. Grow in a naturally more humid space such as a bathroom or near the kitchen sink. Place on a pebble tray filled with water. Ferns may not recover if allowed to become too dry.
