

fern leaf cactus

The Fern Leaf Cactus is an epiphytic, spineless cactus. It's beautiful, Fern-like stems can grow to be 6 feet in length.

Grow in bright light for best results.

Use a sharp, well-drained potting soil such as a Cactus specific mix. Your soil should take up water, but drain and dry quickly.

Thoroughly water when soil is almost completely dry. Water well, let drain, let dry in between watering, repeat.

Fertilize with a cactus specific fertilizer each time you water during active growth. Reduce fertilization to once per month during fall and winter months.

This cactus sometimes blooms, and when it does, it shows off a big, beautifully fragrant flower.
