

# homalomena

Homalomena are newer to the houseplant scene  
and are members of the Aroid plant family.

---

Place in bright, indirect to medium light.

Feed weekly during periods of active growth; spring and summer.

Plant in all-purpose potting soil.

Homalomena leaves are actually quite fragrant and are used for a variety of medicinal purposes.

Water when the top 2-3 inches of soil are dry. Cut back on watering in the winter to avoid root rot. Do not allow to completely dry out.
