

jade

A particularly easy succulent, the Jade plant comes in a variety of sizes and colors.

Grow in bright light for best results.

Use a sharp, well-drained potting soil such as a Cactus specific mix. Your soil should take up water, but drain and dry quickly.

Water thoroughly when soil is almost completely dry. Drain and let soil dry between waterings. Larger plants may only need water once per month.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March.

These plants were once thought to bring good luck to their owners, and are often given as housewarming gifts.
