

# jewel orchid

This classy plant is dressed in dark foliage with pretty pink pinstripes. Jewel orchids are a terrestrial unlike their epiphytic counter parts.

---

Jewel Orchids prefer medium light but can tolerate low light. Direct sun will cause the leaves to burn.

Fertilize with an orchid specific fertilizer to promote blooms.

Plant in all-purpose potting soil or create your own terrestrial mix containing 2-3 parts potting mix, 1 part vermiculite, and 1/2 part worm castings.

Jewel orchids are pet friendly!

Water when the top 2-3 inches of soil are dry. Cut back on watering in the winter to avoid root rot. Do not allow to completely dry out.
