

lipstick plant

Ideal in a hanging basket, this aptly named plant has brightly colored, tube shaped flowers. With shiny, deep green foliage on long tendrils it's a stunning plant even when not in bloom.

Place in bright, indirect to medium light.

Feed weekly during periods of active growth; spring and summer.

Plant in an all-purpose potting soil.

Prune stems back to 6" after flowering is complete to encourage new growth.

Water thoroughly when the top few inches of soil are dry. These plants can tolerate drought after blooms have dropped.
