

# monstera

Monstera are relatively easy, fast-growing, and forgiving indoor plants. They are best known for their beautiful leaf shapes that become fenestrated as they mature.

---

Monstera prefer bright, indirect to medium light. Direct sun may burn the leaves.

Plant in a well-draining, all purpose potting soil rich in organic matter.

Water thoroughly when the top few inches of the soil are dry.

Fertilize weekly with an all purpose, indoor plant fertilizer.

Monstera love humidity. Higher humidity leads to larger leaves and big fenestrations. Plant with the support of a moss pole for best growth potential. With so many varieties to choose from, its hard to pick just one.
