

palms

Palms are majestic specimen plants that add a tropical touch to any setting. Many varieties grow to be quite tall and wide so plan accordingly. True palms are also pet safe.

Palms like bright, indirect light. A full Eastern exposure or filtered light facing South is ideal indoors. Palms can take half day sun when planted outdoors.

Plant in a well-draining, all purpose potting soil rich in organic matter.

Keep palms evenly moist. Water when the top 2 inches of soil have dried out. Do not let them dry all the way out or sit in saturated soil.

Fertilize weekly with an all purpose, indoor plant fertilizer during periods of active growth. Use a slow release palm specific fertilizer 3-4 times per year for easy use.

Place Palms outdoors in the summer for a tropical feel. They will love the heat and humidity of the summer and reward you with massive growth. Check for pests often. Spider mites are common on Palms.
