

# ponytail palm

Ponytail Palms are slow growing and will remain small and manageable for many years. Their unique stump shape gives them the common name Elephant Foot or Bottle Palm.

---

Place in bright, indirect light. Tolerates medium light.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March.

Plant in an all-purpose potting soil.

Ponytail Palms are not actually palms, but succulents. Ponytail Palms are pet safe!

Water when the soil is half-way dry. If you forget, don't worry, the Ponytail Palm's bulbous trunk is made for storing water to help the plant survive periods of drought.
