

pothos

Pothos is a perfect houseplant for the beginners or busy people.
A great plant for office or dorm room life.

Pothos grow vigorously in bright or medium light. Some varieties do tolerate low light, but their color may dull or variegation may fade.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March.

Plant in an all-purpose potting soil.

If left to grow on their own, Pothos tend to get leggy. Prune and trim to encourage new, branchy growth. Easily propagate tendrils by placing in a vase or vessel of water.

Water when the top 2-3 inches of soil are dry. Cut back on watering in the winter to avoid root rot. Do not allow to completely dry out.
