

# sago palm

Despite their name, Sago Palms aren't palm trees at all. They are actually Cycads, one of the earliest land dwelling plants peaking in diversity during the Jurassic period.

---

Place in bright, indirect light. Tolerates medium light.

Fertilize monthly with an all-purpose fertilizer during active growth, lower strength and regularity in fall and winter months.

Plant in an all-purpose potting soil.

Watch out! Cycad fronds are spikey.

Water when the soil is half-way dry. If you forget, don't worry, Sago Palm's trunk is made for storing water to help the plant survive periods of drought.
