

schismatoglottis

A new comer to the indoor plant scene, schismatoglottis are highly sought after for their silver variegation.

Place in bright, indirect light.

Plant in an all-purpose potting soil.

Water when the top 2-3 inches of soil are dry. Cut back on watering in the winter to avoid root rot. Do not allow to completely dry out.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March.

Schismatoglottis are pet friendly!
