

scindapsus

Scindapsus are easy care plants with similar care requirements to pothos and are also member of the Aroid plant family.

Scindapsus grow vigorously in bright or medium light. Some varieties do tolerate low light, but their color may dull or variegation may fade.

Plant in an all-purpose potting soil.

Water when the top 1-2 inches of soil are dry. Cutback a bit in the winter to avoid root rot.

Fertilize every 2 weeks during active growth. Cut fertilizer strength and frequency in half October - March.

Scindapsus will show you when they are thirsty by curling their leaves inward.
