

string of hearts

This trailing succulent is known for its delicate, heart-shaped foliage.

Place in bright, indirect to medium light.

Fertilize monthly with an all-purpose fertilizer during active growth, lower strength and regularity in fall and winter months.

Plant in an all-purpose potting soil.

String of Hearts are easy to propagate, simply cut a long vine and place on damp soil. Roots will form at each node.

Similar to succulents, string of hearts prefer a good soak once their soil has completely dried. If the leaves start to wrinkle, your plant needs water.
