

yucca tree

The Yucca Tree is versatile, easy to care for, and slow growing. Spiky foliage is a striking contrast and welcome addition to indoor spaces.

Yuccas prefer bright and direct light. Place the in a West or South facing window for best results.

Plant in an all-purpose potting soil or consider using a cactus specific potting soil for added drainage and aeration.

Water when the soil is half-way dry. If you forget, don't worry, Yucca's trunk is made for storing water to help the plant survive periods of drought.

Fertilize monthly with an all-purpose fertilizer during active growth, lower strength and regularity in fall and winter months.

As a desert plant, Yucca will suffer with low light conditions especially paired with overwatering.
